Profile Summary

Full-Stack Engineer with **5+ years** shipping production **Node.js, NestJS, and React/React Native** systems. Architected telecom provisioning platform serving ~1M users and built an AI-powered computer-vision mobile product. Owns services end to end across telecom, IoT, healthcare, transportation, and ERP domains, and mentors backend engineers on architecture standards.

Technical Skills

Stack: TypeScript, Node.js, NestJS, React.js, Next.js, React Native (CLI & Expo)
Databases: PostgreSQL, MySQL, Firestore, DynamoDB, Redis, BigQuery
Cloud & Infrastructure: GCP, AWS, Docker, CI/CD, Linux
Integrations & Realtime: SIP/VoIP, MQTT, WebSockets, VPN, Looker

Work Experience

Kevych Solutions • Full Stack Developer

01/2024 - Present

- Telecom Provisioning Platform (eSIM, Call Routing and VPN):** Architected and shipped Node.js/NestJS services for eSIM and phone number provisioning, call routing and VPN on a telecom platform serving ~1M users; integrated SIP/VoIP providers for real-time call handling.
- Ride-Hailing Backend Modernization:** Led an event-driven refactor of a legacy taxi ride-hailing backend, adding a Node.js WebSocket layer for real-time ride tracking – moved the team from firefighting bugs to shipping new features.
- IoT Device Control:** Integrated MQTT-based IoT device control via AWS IoT Core, enabling real-time remote management of connected devices.
- Analytics & BI Layer:** Built an analytics layer over a Firestore-based platform – replicating data into BigQuery to work around Firestore's query limitations – and delivered Looker dashboards used for business and usage metrics.
- Cross-Platform Mobile & Admin Tooling:** Developed cross-platform mobile apps with React Native and responsive web frontends/admin panels with React and Next.js; built self-service tooling for business customers to manage accounts, provisioning, and usage.
- Engineering Leadership:** Mentored backend engineers and established architecture standards on new projects spanning telecom, IoT, healthcare, transportation, and ERP.

Technologies: Node.js, TypeScript, NestJS, React, Next.js, React Native, Google Cloud, AWS, SIP/VoIP, MQTT, Firestore, BigQuery, Looker, PostgreSQL, Redis, WebSockets, Docker

Appexoft • Full Stack Developer

07/2021 - 01/2024

- AI-Powered Fuel Price Recognition System:** Built the mobile and backend components of an AI/computer-vision system that recognized competitor fuel prices from roadside signage, giving retailers real-time market visibility.
- Pricing Management App:** Built a pricing management app for fuel retailers with real-time competitor price monitoring and direct POS price updates from mobile devices.
- Monetization:** Integrated in-app purchases and subscriptions across iOS and Android via RevenueCat.
- Legacy Stabilization:** Stabilized mobile and backend codebases by resolving critical production bugs and refactoring legacy code.

Technologies: TypeScript, React Native, Node.js, NestJS, RevenueCat

Education

Lviv Polytechnic National University, Ukraine (Anabin H+) 2020-2024
Bachelor of Computer Engineering

Language Skills

Ukrainian (Native) | English (C1) | German (A2, Learning)
